SilaMill **N4**evo

Wet grinding reloaded.

Innovation in dental technology.

SilaMill N4 evo – ideal for in-office labs

The SilaMill N4 evo redefines precision and flexibility in wet grinding technology. This powerful milling and grinding system has been specially developed for in-office laboratories and enables the efficient production of high-quality dental restorations.

With its high-performance spindle, exceptional repetition accuracy and speeds of up to 80,000 RPM, the N4 evo delivers ultra HD results for a wide range of indications. The automatic tool changer for up to eight tools, integrated cooling system and simultaneous processing of multiple blocks ensure maximum productivity with minimal effort.

Optimize your in-house workflow with the SilaMill N4 evo and rely on validated precision and economic efficiency for the future of dental manufacturing.
